

# MSc Global Futures

This brand new course explores the critical global challenges facing our world today, and how we can tackle them in the future. Through the three pathways below, the course uses the cutting edge human geography knowledge and research methods in Royal Holloway's Geography Department to equip students to be the world changers of tomorrow.

## Culture and Creativity

Our world is rapidly changing before our very eyes. Increased artificial intelligence, mobility, polarising political landscapes, environmental catastrophe, rising inequality and contested ideas of history and heritage raise fundamental questions about our cultural identities and lives. How we work together creatively to tackle these issues is more important than ever.

Thematically cultural and creative geographies focus on the interconnections between place, landscape, environment, mobilities and identity, and thus have profound relevance for the future of our world. In this exciting Masters degree, you will engage with some of the most profound challenges of our times.

Culture & Creativity

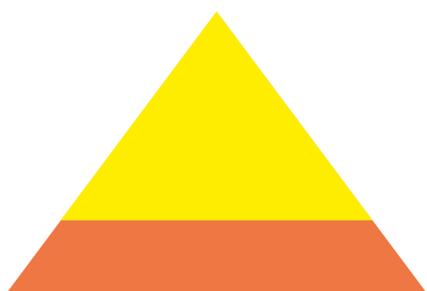

## Geopolitics and Security

The upheaval of global politics in recent years has brought with it unique and unforeseen challenges, from the threat of environmental catastrophe and resource shortages, to the rise of populist political parties to infrastructural and economic failure and global terror. In this course, you will understand these era-defining issues and reflect critically and creatively on the strategies and techniques which seek to keep us secure.

Graduates of this course will gain a Masters of Science in a discipline offering excellent employability prospects, while professionals seeking further academic training will learn transferable risk management skills ideal for further career development.

Geopolitics & Security

## Justice, Development and Sustainability

Interest in development, environment and issues of sustainable development has never been so intense. There are major international institutions and policies all focusing on justice and security. For example, the UN climate change summits, Sustainable Development Goals and the World Social Forum; they are looking to lead the way on future environmental and development agendas globally.

On this wide-ranging course, you'll learn from expert academics with experience in different developing regions and economies in transition, including Latin America, the Caribbean, South, East and South-East Asia and Sub-Saharan Africa.
